SmartSL Series U7-100

VETRON presents a series of extremely lean, fanless industrial computers. The versatility of the products is a real asset, as the use of Qseven CPU modules provides high flexibility in processor performance and Qseven features such as memory, etc.

The devices are based on the Bay Trail architecture from Intel. Thanks to Qseven-Modultechnik, the interface configuration can also be individually tailored to the requirements of the customers and their application - even with small quantities. 1 x USB 2.0, 1 x RS-232, 1 x DP, 2 x Gigabit Ethernet and 1 x audio (line-out) / MIC are standard features. There are also two slots for full-size PCI Express mini cards.

With dimensions of 160 x 88 x 19 mm, the SmartSL U7-100 series is about the size of a smartphone, providing a compact solution for factory automation (industrial 4.0), machine control and embedded applications. The devices require a supply voltage between 9 V dc and 32 V dc ($\pm 5\%$) and can be used at temperatures from 0 ° C to + 50 ° C.
